Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

- 1. (currently amended) A method for controlling aging compensation in an OLED display having one or more light emitting elements comprising the steps of periodically measuring the change in display output to calculate a correction signal; comparing any change in the periodically calculated correction signal to a correction limit, and restricting the change in the correction signal at each period if the change in the correction signal exceeds the correction limit; and applying the correction signal to the OLED display to effect a correction in the display output.
- 2. (original) The method claimed in claim 1 wherein the measurement is one or more measurements from the group including a light output of one or more of the light emitting elements; a current used by one or more of the light emitting elements; a voltage across one or more of the light emitting elements; an accumulation over time of the use of current by one or more of the light emitting elements; an accumulation of the luminance values provided to one or more of the light emitting elements; an accumulation of the time that one or more of the light emitting elements is in use; a sampling of the data displayed on the display; and a temperature of the display.
- 3. (original) The method claimed in claim 1 wherein the correction is restricted to be monotonically increasing.
- 4. (original) The method claimed in claim 1 wherein the correction is restricted to a fixed percentage change in the correction value.
- 5. (original) The method claimed in claim 1 wherein the correction is restricted to be monotonically increasing and to a fixed percentage change in the correction value.

- 6. (original) The method claimed in claim 1 further comprising the step of storing a history of changes in the correction signal and using the history with the measured change to determine the restrictions.
- 7. (original) The method claimed in claim 1 wherein the restrictions change over time.
- 8. (original) The method claimed in claim 1 wherein the correction signal is one or more of the group including a voltage applied to the display; a voltage applied to each pixel; a charge applied to each pixel; and a data value applied to each pixel.
- 9. (original) The method claimed in Claim 1 wherein the OLED display is a passive-matrix display.
- 10. (original) The method claimed in Claim 1 wherein the OLED display is an active-matrix display.
- 11. (currently amended) The method claimed in Claim 1 wherein the eorrections are correction is applied to groups of light emitting elements.
- 12. (original) The method claimed in Claim 1 wherein different corrections and/or restrictions are applied to groups of light emitting elements.
- 13. (original) The method claimed in Claim 12 wherein the groups are colors of light emitting elements.
- 14. (original) The method claimed in Claim 12 wherein the groups are spatially distinct groups of light emitting elements.
- 15. (original) The method claimed in Claim 1 wherein different restrictions and/or corrections are applied to light emitting elements for different display brightness levels.

- 16. (original) The method claimed in Claim 1 wherein the change in display output is measured at power-up of the display.
- 17. (original) The method claimed in Claim 1 wherein the change in display output is measured at power-down of the display.
- 18. (original) The method claimed in Claim 1 wherein the change in display output is measured periodically while the display is in use.
- 19. (original) The method claimed in Claim 18 wherein the period of measuring the change in display output changes over time.
- 20. (currently amended) The method claimed in Claim 1 wherein the corrections maintain correction maintains a constant average luminance output for the display over its lifetime.
- 21. (currently amended) The method claimed in Claim 1 wherein the eorrections maintain correction maintains a decreasing level of luminance over the lifetime of the display at a rate slower than that of an uncorrected display.
- 22. (original) The method claimed in Claim 1 wherein the correction is applied with a lookup table.
- 23. (original) The method claimed in Claim 1 wherein the correction is applied with an amplifier.
- 24. (original) The method claimed in Claim 1 wherein the display output is the brightness of the display.
